Radinium Access

SALTO ProAccess SPACE integration into Milestone XProtect®

Next generation keyless access control with a watchful eye.

Radinium Access is a Milestone XProtect® MIP plugin integrating the SALTO ProAccess SPACE system using the SHIP protocol. XProtect® rule engine and permission system integration allow per-door opening or closing, access logs, live events and live door status for online doors.

The SVN data-on-card allows access information to be stored on the card, tag, sticker or mobile keys, providing offline locks capabilities. Offline doors are supported within this integration.

Assigning up to 2 cameras per door makes it easy to do an advanced search with filtering, associated recordings and maps within Milestone XProtect®.

Go to https://www.radinium.com/salto for a trial download.

Milestone Professional+, Expert, Corporate 2018 R3 or higher required.
SALTO SHIP module required.

Windows LTSC, Windows 10 Pro, Server 2012 R2, Server 2016, Server 2019 support.

Features include:
Live door status
Live Events
Review & Search Events per Cardholder
Battery Levels
Recorded Events
Open & Close Doors
Role Permissions
Rule Engine Integration
Access Reports

Live Door Status

View live cameras for every door with a simple click on the door name under 'Door Status' with locations on maps. (Up to 2 cameras per door can be assigned.)

The list shows the door name, open or closed, errors and battery status.

Live Events

View live SALTO events as they happen with playback, person details and the location on a map.

SALTO events are time synchronized with the recorded video.

Review & Search Events Per Cardholder

Search 'Events Per Cardholders' by event types and per doors available from SALTO.

Cardholder information available associated with the event.

Battery Levels

Filter battery levels per door under 'Door Status'. It shows the battery level of offline doors with a percentage indication.

Recorded Events

Easily view recorded events with playback footage per door, per cardholder or by event type.

Open and Close doors

Right-click to open and close online doors from the Smart Client.

Role Permissions

Give a Smart Client user per door or by access level permission for access to doors through Milestone Roles. If a Smart Client user doesn't have permission to access a door, they are not able to open or close it via Smart Client.

Rule Engine Integration

SALTO ProAccesss is fully-integrated into Milestone Rule Engine. Configure a rule if access was denied at a particular door, send an alarm to the Smart Wall, and send an email notification with a snapshot and create a log entry for Radinium Reports. The sky is the limit.

Access Reports

Filter reports by door, cardholder and/or SALTO event type, generated into PDF format.

	Access Audit
